ABOUT ME

Working professionally as a Software Developer since 2015. Since then I have accumulated a lot of experience, especially in Web Development. Along the way I was able to learn in practice from my mistakes and from my more experienced colleagues. Which helped me succeed in other activities performed later. And I continue to look for new opportunities so that I can continue to progress professionally in my career and as a person.

Born on June 9, 1991, having completed basic education in 2006 and general secondary education in 2008. Graduated in **Computer Systems Programming** from the "Instituto Industrial e de Computação Armando Emílio Guebuza" in 2014 and having attended the Degree in *Systems Administration Information and Networks* at "Universidade São Tomás de Moçambique", (1st year only).

I plan to continue doing more certifications in addition to the Udemy training: **Javascript, Java, Python**, a little bit of *DevOps*.
